

“Sysgenic Group announces the implementation of new modules of the integrated solution from IBS Xtended Plastsistem BN”

Press release

Sysgenic Group announces the implementation of new modules of the integrated solution from IBS Xtended Plastsistem BN (Group Teraplast)

There is no clearer evidence of an ERP implementation success than the second important order coming from the same customer. Begun in 2004, the collaboration with Plastsistem BN, part of Teraplast was marked in the first stage of implementation of the basic modules of iBS ERP system, produced by Sysgenic Group, namely Sales, Acquisitions, Business Intelligence, Payroll, Accounting and Means Fixed.

Plastsistem doubled its turnover in 2008 to 14 million euro, profit increased nearly four times from 2007 to 950,000 euro, in the context of shrinking the company to 66 employees. Proof, therefore, that quality management together with appropriate software solutions can bring efficiency even in a year of crisis.

After five years of successful use of iBS ERP solution, in December 2009 we will start the implementation, project planning and tracking module production with post-calculation module and the integration of production with wages.

Sysgenic Group is a network of companies in the IT & C in the last 11 years has invested in training a team of professionals - economists, lawyers, market analysts, IT specialists, enabling the development and market positioning of an ERP (Enterprise Resource Planning), but while offering outsourcing services to both Romanian companies and those abroad, especially developing software for banking and financial markets trading in Europe and the United States

Sysgenic Group is "Microsoft Gold Certified Partner" since 2005, the same year that obtained ISO 9001:2000 certificate for Quality Management for all companies in the group. The 2007 becomes CMMi Level 3 certified, being among the top three firms in the country that have obtained this certification and the first outside Bucharest!
