Press release

Sysgenic starts the implementation of iBS Xtended to one of the most important compressor manufacturers worldwide, European Gas Systems

The project is a new challenge for Sysgenic analysts and developers because it's a very complex system for the production planning, monitoring and control. The system will take real-time data from the production lines and will help EGS decision makers and production controllers to take strategic steps for purchasing materials and also human resource allocation. It will be completely integrated with the other modules of iBS Xtended ERP: HR, Stocks, Accountancy, Business Intelligence.

European Gas Systems (EGS) is a local investment of an international company that started early this year and it focuses on the production, installation and maintenance of compressor units for industrial plants, mainly for the extractive industries such as Gas and Oil Plants.

After 10 years of successful implementations of iBS Xtended ERP solution, EGS decisions to work with Sysgenic represent a natural recognition of the quality deliveries and personnel that the Sysgenic provides.

Sysgenic Group is a network of companies in the IT & C in the last 12 years has invested in training a team of professionals - economists, lawyers, market analysts, IT specialists, enabling the development and market positioning of an ERP (Enterprise Resource Planning), an integrated Trading Suite for the Romanian Exchanges and lately a specific Medical Application for Clinics.

Sysgenic Group is "Microsoft Gold Certified Partner" since 2005, the same year that obtained ISO 9001:2000 certificate for Quality Management for all companies in the group. The 2007 becomes CMMi Level 3 certified, being among the top three firms in the country that have obtained this certification and the first outside Bucharest!
